Poll Insights

Before the industrial era (pre-1750), what do you think were the primary sources of methane emissions?

How does methane compare to CO2 in terms of its global warming potential over a 100-year period?

In some scenarios, you might have to choose between improving either precision or recall. What could be the implications of prioritizing one over the other in methane plume detection?

Before the industrial era (pre-1750), what do you think were the primary sources of methane emissions?
